THINGS TO KNOW ABOUT ELECTRIC VEHICLES

THERE ARE THREE PRIMARY TYPES OF ELECTRIC VEHICLES:

- Battery-electric vehicles are powered by electricity stored in a battery pack.
- With plug-in hybrid vehicles, an electric motor and sizable rechargeable battery are combined with a gasoline or diesel engine.
- The electricity needed to power the motor in fuel cell automobiles is created by splitting hydrogen molecules into electrons.

THE CARBON FOOTPRINT OF ELECTRIC VEHICLES IS SMALLER THAN THAT OF GASOLINE-POWERED

A car, short for "automobile," is a wheeled motor vehicle designed for the transportation of passengers and goods. It is one of the most common and versatile forms of transportation in the modern world.

“

The best way to see a country is from the footplate of a locomotive

We're bringing you a new car

The term "loco engine" is not typically used in the context of cars or automobiles.

"Loco engine" is commonly associated with locomotives used in rail transportation. In the context of cars, you would refer to the vehicle's engine as an "automobile engine" or simply an "engine." Automobile engines are designed to power cars and other motor vehicles

Cars are powered by internal combustion engines, electric motors, or a combination of both. Internal combustion engines run on gasoline, diesel, or alternative fuels and convert fuel into mechanical energy to propel the vehicle.

Cars play a significant role in people's daily lives, providing convenient and flexible transportation for commuting, leisure, and various other purposes. They have had a profound impact on society, shaping the way we live, work, and travel, and have become a symbol of mobility and personal freedom.
